ABOUT JOTNE IT

The leader in product data exchange and sharing
Jotne EPM Technology data products have successfully reduced development and product lifecycle costs through the use of intelligent data management in the areas of Defense, Aeronauti Oil & Gas, Built Environment and Aerospace.

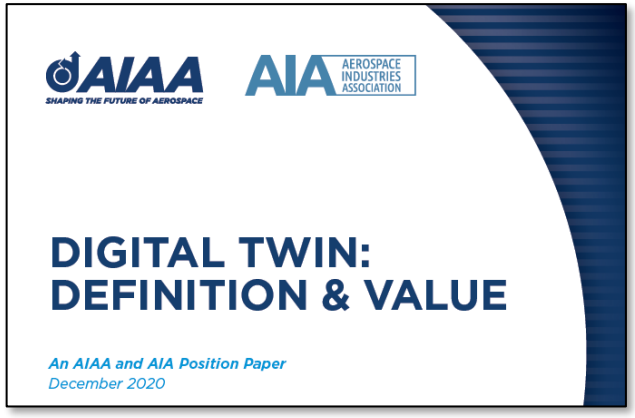
Presented by Digital Engineering Integration Committee (DEIC), 18 August

Standards



1. Need to develop appropriate standards and/or standard approaches so that Digital Twins can interact with other *Digital Twins across the life cycle and supply chain*.

2. Significant value and increased collaboration could be realized by establishing appropriate foundational *open standards (e.g. data and models)* and life cycle architecture frameworks.

3. Therefore, additional focus and effort should also be given to addressing which *elements of this foundation should be open.*

Used in Eurofighter PDM

ISO®

AIRBUS

LEONARDO

BAE SYSTEMS

How is STEP Used at Lockheed Martin

Geometric Data Exchange - AP 203, AP 242

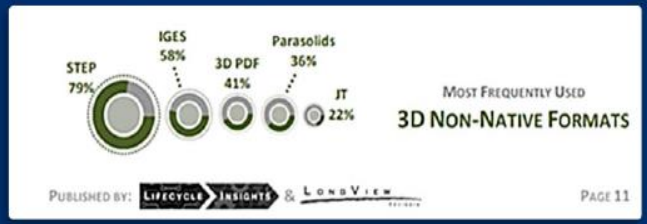
- Exchanging data between different systems (CAD, CAM, CAE, and PDM)
- Enabling 3D model information to integrate into non-CAD applications
- Supplier data exchange

Technical Data Package Core Information Exchange - AP 232

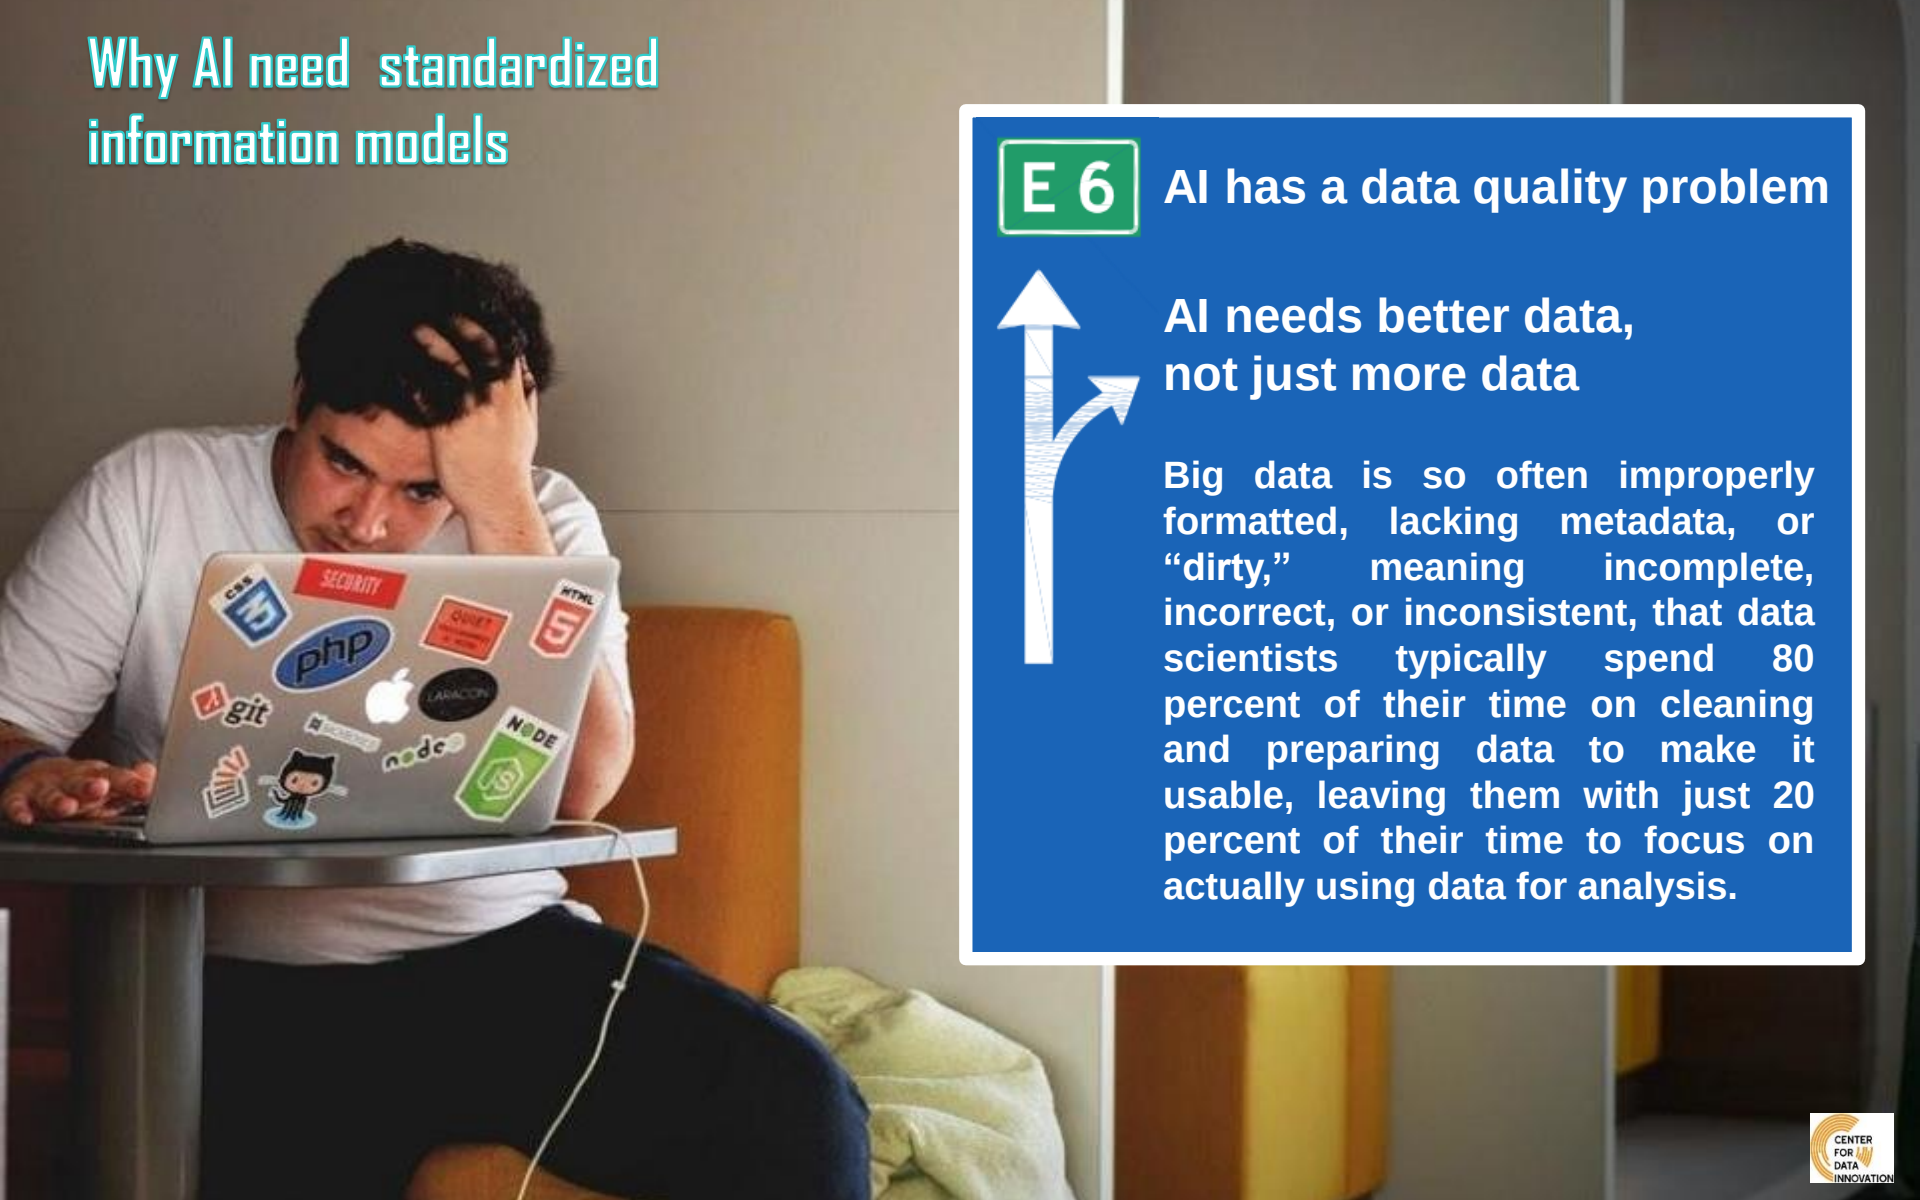
Supporting Various Aircraft Programs Including F-16, F-22, F-35, T-50, F-2 and C-130J

STEP converter development

Lockheed Martin Handles 500,000+ STEP Files per year



Why AI need standardized information models



77% of professionals believe that interoperability is the largest challenge facing the industrial internet. © survey by IoT Nexus

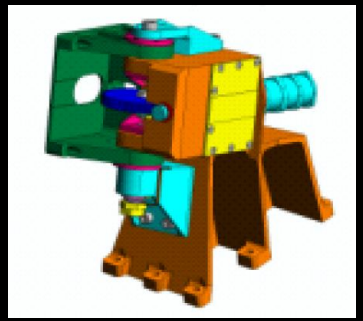
ISO 10303 STEP Standards development

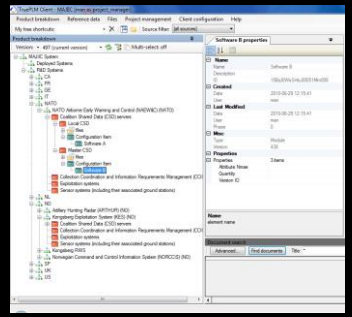
1994: CAD AP203

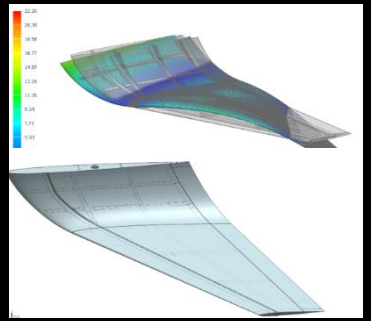
1999: PLM AP214

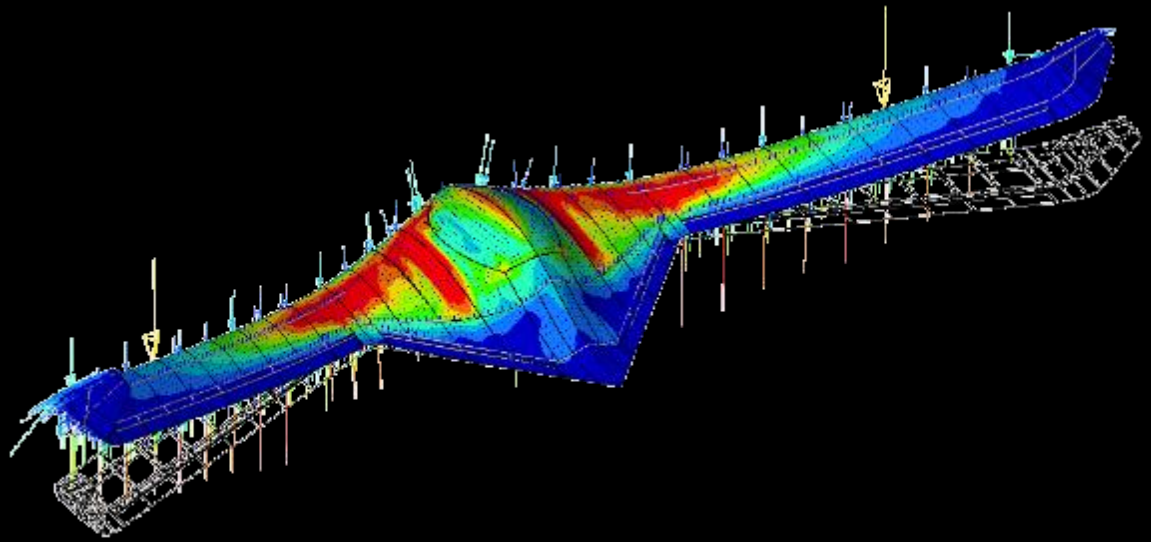
2005: ILS AP239

2014: CAE AP242/209









CAD, Simulation, Manufacturing, Test, Sensor and Operational Data in one standardized repository using ISO 10303. Facts or fiction?

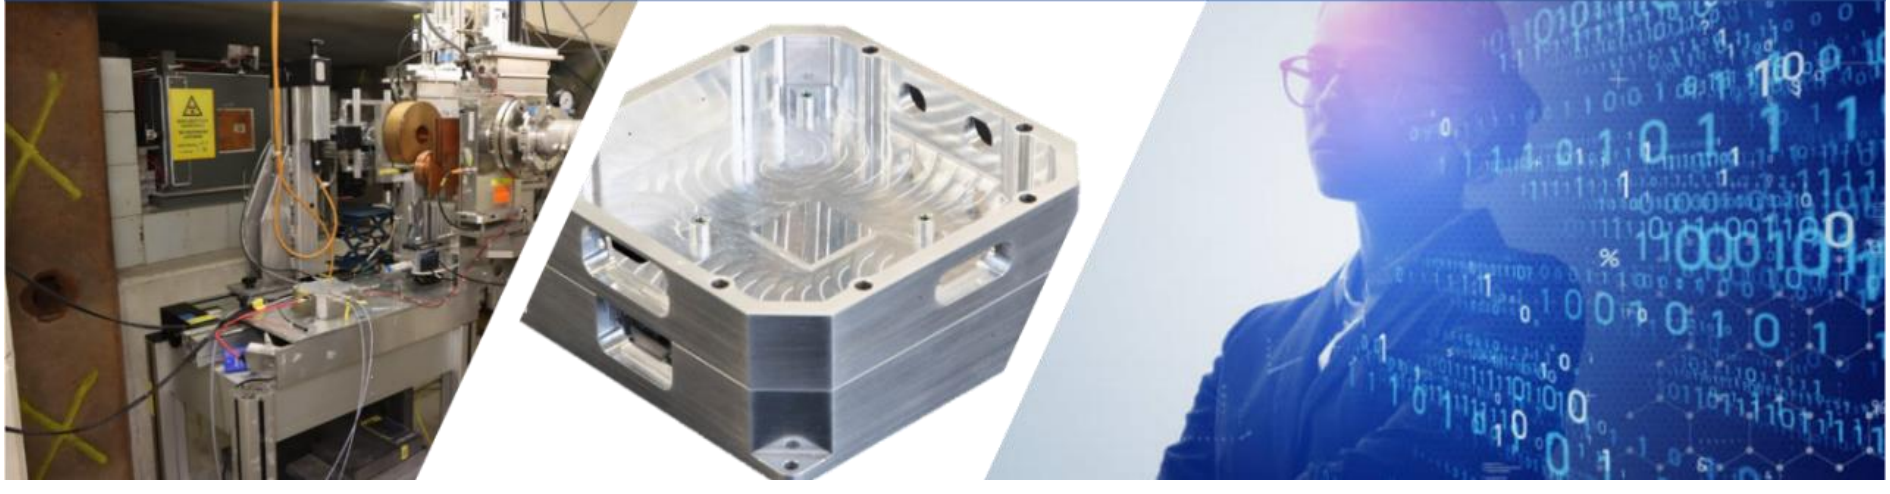
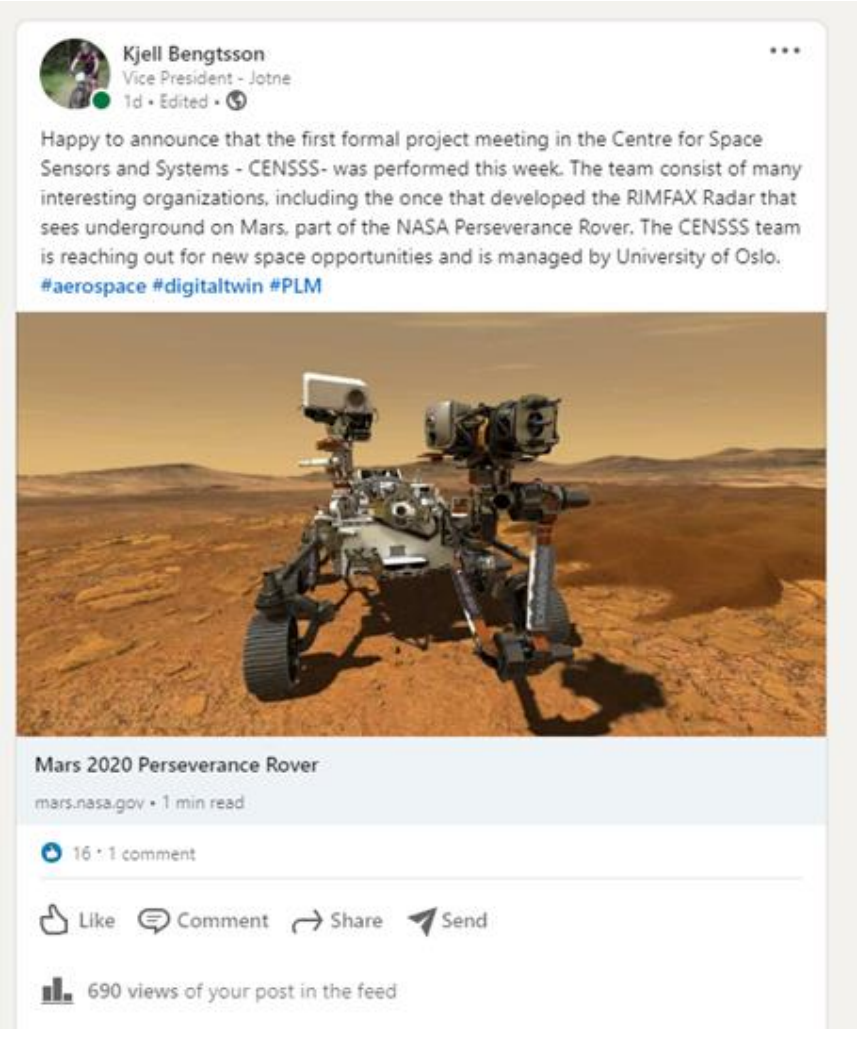
METRIC: STANDARD BASED DIGITAL TWIN





CENSSS.no
Digital Twin for Spacecraft

CENSSS will in collaboration with Norwegian industry develop new instruments and sensor systems, New-Space satellites system integration, operation and exploitation of satellite data.

Using Standard Based Digital Twins based on open and publicly available specifications makes it easier to trace products and sensor information, and to integrate these in a well-arranged manner. This improves data exchange, sharing and archiving processes, cutting both time and cost, yet improving quality.

ARROWHEAD TOOLS

Digital Twin for Additive Manufacturing Process

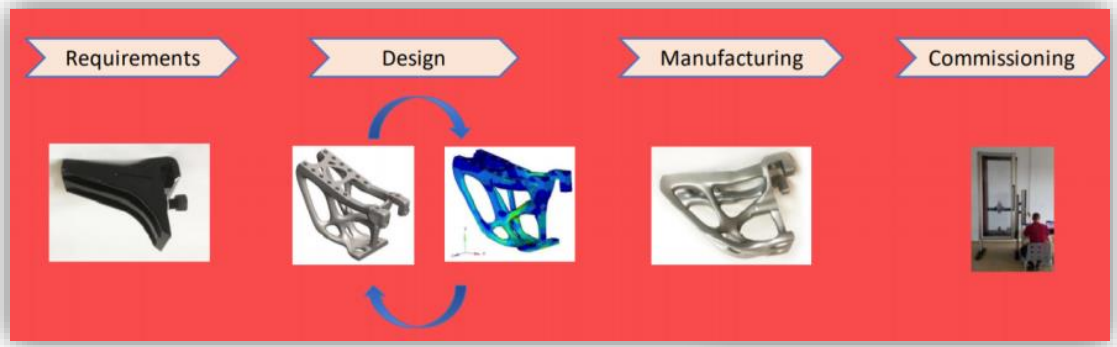
Jotne provides Digital Twins capabilities to overcome existing issues SMEs are facing

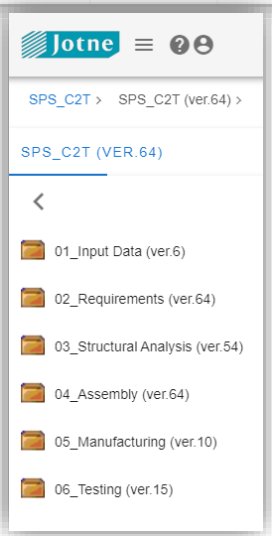
Data Storage – Collect data along the life of a product or project cycle

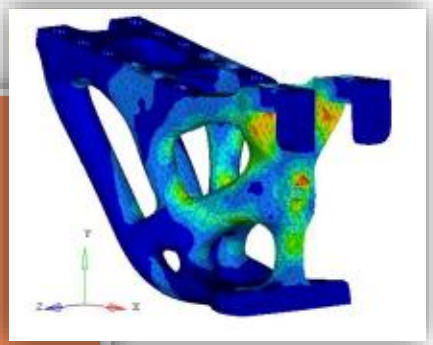
Interoperability

Data Exchange - Export/import facilities using ISO 10303-239/209

Data Archiving - project data can be exported in a standard format that does not depend on specific software







SPS working on Pilot Use Case - Prothesis Adapter in colloboratiion with Jotne

Integration of other CAD tool with PLM

CAD and document management

Change management Functionality

Follow Standardised procedure for data exchange

KYKLOS 4.0 Smart and Circular Manufacturing

KYKLOS 4.0

KYKLOS 4.0 will **demonstrate** the transformative effects that Circular Production System (CPS), Product Life Management (PLM), Life Cycle Analysis (LCA), Augmented Reality (AR) and Artificial Intelligence (AI) technologies and methodologies will have to the **Circular Manufacturing** framework

Smart Manufacturing Pilots

01 Aerospace Pilot (**GENERAL ELECTRIC and KANFIT3D** facilities – Israel)

02 Electronic Devices/Equipment Pilot (**VESTEL** facilities – Turkey)

03 Medical Pilot (**PRO MEDICARE** facilities– Italy)

04 Electronic Manufacturer Pilot (**CONTINENTAL** facilities – Romania)

Circular Manufacturing Pilots

01 Automotive Pilot (**DIGRO** facilities – Italy)

02 Shipyard Pilot (**ASTANDER** facilities – Spain)

03 Food Industry Pilot (**PINDOS Cooperative** facilities – Greece)

Source: Wikipedia

Norwegian use case:

Due to a variable demand in the energy market, frequent start and stop actions are required by hydropower plants to provide regulation of turbines.

Instrumenting the turbines with microphones and analysing anomalities in the gathered sound data could help optimise start- and stop routines and consequently reduce wear.

Arrowhead Tools

Europe's larges Automation and Digitalisation Engineering project

- Joint European effort in 18 countries
- 80 partners
- 90 M€ budget
- Duration 2019-2022

Digital Twin FEA technology

Our Digital Twin models are simulated real time in FEDEM:

- CAE
  - 3D modelling / idealization
  - Joint / spring / damper / sensor modelling
  - Substructuring (25 super elements)
  - Meshing
- Dynamic simulation (nonlinear FEA)
  - Forces, Positions, Velocities and Accelerations
- Structural Analysis
  - Stresses / strains
  - Vibration frequencies
  - Damage / durabillity
- Control / hydraulics
  - PI / PD / PID Controllers
  - Closed loop dynamics

$$\mathbf{M}(\mathrm{r},t)\,\ddot{\mathbf{r}}(t) + \mathbf{C}(\mathrm{r},\dot{\mathrm{r}},t)\,\dot{\mathbf{r}}(t) + \mathbf{K}(\mathrm{r},t,\sigma)\,\mathbf{r}(t) = \mathbf{F}(t)$$

$$\varepsilon_{rosette} = \left[\mathbf{T}_{re}\tilde{\mathbf{B}}\mathbf{T}\mathbf{A}\mathbf{L}\mathbf{H}\right]\mathbf{v}_{sup}$$
